The Semiconductor Application Markets Report

Foreword

Fully revised and completely updated, this **Seventh Edition** of the Future Horizons' "**Semiconductor Application Markets Report**" analyses the key applications markets driving the semiconductor market. The 2010 edition covers the historical data for 2004-2009, together with a five year forecast for 2010-2014 inclusive.

The Report analyses the market by product, application market, and region, all in a convenient annual report format. The 2010 edition covers the historical data for 2004-2009, together with a five year forecast for 2010-2014 inclusive.

This report is published in direct response to the market need and complements the "**Global Semiconductor Update Report**" - which provides the latest information on developments in the **Worldwide Semiconductor Industry**, changes in the **Markets** and **Production Capacity**, and the impact of the global economic situation every month.

This high-quality, authoritative report provide the full spectrum of information and analysis on the Semiconductor Application Market, normally only available via expensive, subscription-style research services

The "**Semiconductor Application Markets Report**" significantly reduces the cost of external market research by offering a high quality, better value alternative to anything currently available. This report is essential for those involved in semiconductor market research and business development planning in the global semiconductor market. It will also prove invaluable for authorities and government departments in planning and directing economic growth, as well as companies seeking to invest in these markets.

Future Horizons was established in April 1989 by Malcolm Penn, previously Director of European Research with Dataquest. It provides market research, technology and design evaluation, training and other business support services for use in opportunity analysis, business planning and new market development. Its competence spans the worldwide electronics and IT industry and European market environment. **Future Horizons**, together with its wholly-owned Moscow-based subsidiary, **East-West Electronics**, is widely recognised as the world's leading authority on the former USSR and East European electronics market.

Future Horizons offers access to experienced industry veterans, each in a different aspect of the worldwide electronics and IT industry. In addition, **East-West Electronics**, offers direct access to the Russian and the CIS industry and markets.

Each year, **Future Horizons** hosts its renowned "**International Electronics Forum**" aimed at fostering opportunities for co-operation in the global IT and

The Semiconductor Application Markets Report

Foreword

electronics world. In addition, its many international affiliations enable **Future Horizons** to offer a complete programme of European and worldwide semiconductor market research, consulting and training services.

Our semiconductor experience commenced with the IC industry in 1962, *from the first commercial IC to SoC integration*. For all of your semiconductor business development needs, ... *Let Future Horizons' Reports Save YOU Time & Money.*

**25th Year Of Service
Founded 1989**

**5th Decade
Of Semiconductor
Experience**

**Our Experience
Starts With The First
Commercial IC**

Established in April 1989, Future Horizons provides market research and business support services for use in opportunity analysis, business planning and new market development. Its industry information seminars and forums are widely considered to be the best of their kind. Emphasis is placed on the world-wide semiconductor and electronics industry and associated markets. Emphasis is placed on the worldwide microelectronics and electronics industry, and European market environment.

Malcolm Penn is the founder and CEO of Future Horizons, with over 45 years experience in the electronics and semiconductor industry. He has worked extensively throughout Europe as well as in the United States, the former USSR, Japan and Korea, and was an early pioneer of pan-European research and product development collaboration in the 1970s during his tenure with ITT Europe. His industrial experience has involved him with all aspects of the management, manufacturing, marketing and use of electronic components, particularly semiconductor devices.

Future Horizons offers a high-quality, cost-effective, flexible alternative to expensive subscription-style, market research. Our experience commenced with the industry in 1962, from the first commercial IC to SOC integration. For all of your semiconductor business development needs ...
